

Product Name :
Cut Section Model pf Sliding Mesh Gear Box

Product Code :
NEGEMG158

Description :

Cut Section Model pf Sliding Mesh Gear Box

Features:

- Designed for comprehensive study of gear box components & their operation.
- Automotive paints used for painting sectioned gear box assemblies.
- Optional Low speed geared motor to drive the gearbox.

The

CTA-33 is a working cut section model designed to enable students to study different components of a Automotive Gear Box & demonstrate its working. The setup uses an actual automobile sliding mesh gear box used in commercial vehicles, sectioned at suitable locations to display internal meshing gears. In order to visualize operation of the gear box & shifting of gears, a handle is provided to rotate the gear box from input shaft. Optionally an electric motor can be provided to run the gear box.
