

Product Name : Dynamics Of Machine Lab Equipments for Teaching Equipments Lab	Product Code : LABS-EDU-00138
	
Description :	
Dynamics Of Machine Lab Equipments	
The set up consists of a small electric motor connected to a universal governor gear box on belt and pulley system through a flexible coupling. The governor speed is driven by a solid coupling connected to the gear box input shaft and is supported on ball bearing. The universal governor mechanism can be mounted on a spindle. Speed control unit is provided to regulate speed and consequently the governor shaft can be used to run both mechanisms. The governor device in the gear box and speed governor mechanism is weight driven to which weights are added. The Universal Governor can be operated as a stable or unstable Governor. The following range of experiments can be:
