| <b>Description :</b>                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Straight Edge (3 Meters) for Bitumen Testing - A straight edge approximately 3 metres in length may be used to determine lateral surface regularity of a road surface. This lightweight apparatus is made up of mild steel or aluminum as per customers requirement and is equally supported at both ends producing a set height between the road surface & the beam. Any vertical irregularity is measured using incremented wedges. |
